

The background is a light gray with various colorful geometric shapes. There are several large, thick-lined circles in shades of pink, green, and yellow. Smaller solid circles in blue, green, yellow, and red are scattered throughout. Some shapes are partially cut off by the edges of the frame.

Movie Industry Analysis for Microsoft

Fred Mutuma
20 May 2022

SUMMARY

This project was about coming up with insights for Microsoft's new upcoming project (entry into the movie production industry). In general this project is geared towards achieving:

- Statistical analysis of the whole movie industry based on world gross, release time and top genres.
- Visualizations interpreting the analysis done.
- Conclusions and takes from the gathered analysis.

01

BUSINESS PROBLEM

I have been informed that Microsoft want to dip their toes in the movie-making industry, and have tasked me with providing an analysis to be used for this business. They need the necessary knowledge to move forward. I will base my analysis on four main factors:

- Movie Genre: What types of movie content are currently most successful?
- Time of Release: When is the most profitable time of year to release a movie?
- Production Budget: What budget amount tends to achieve the highest box office gross?
- Additional Recommendations: What else do top-grossing movies have in common from the analysed data?

02

THE DATA

- `imdb.title.basics.csv.gz`: contains basic information of top movies with their runtimes, genre and year of release.
- `title.ratings.csv`: This dataset contains ratings from the movies mentioned in the basics dataset above.
- `tn.movie_budgets.csv`: This dataset contains the production budgets for top grossing movies of all time.
- `bom.movie_gross.csv`: This dataset contains domestic and worldwide gross of movies from 2010 onwards to 2019.

03

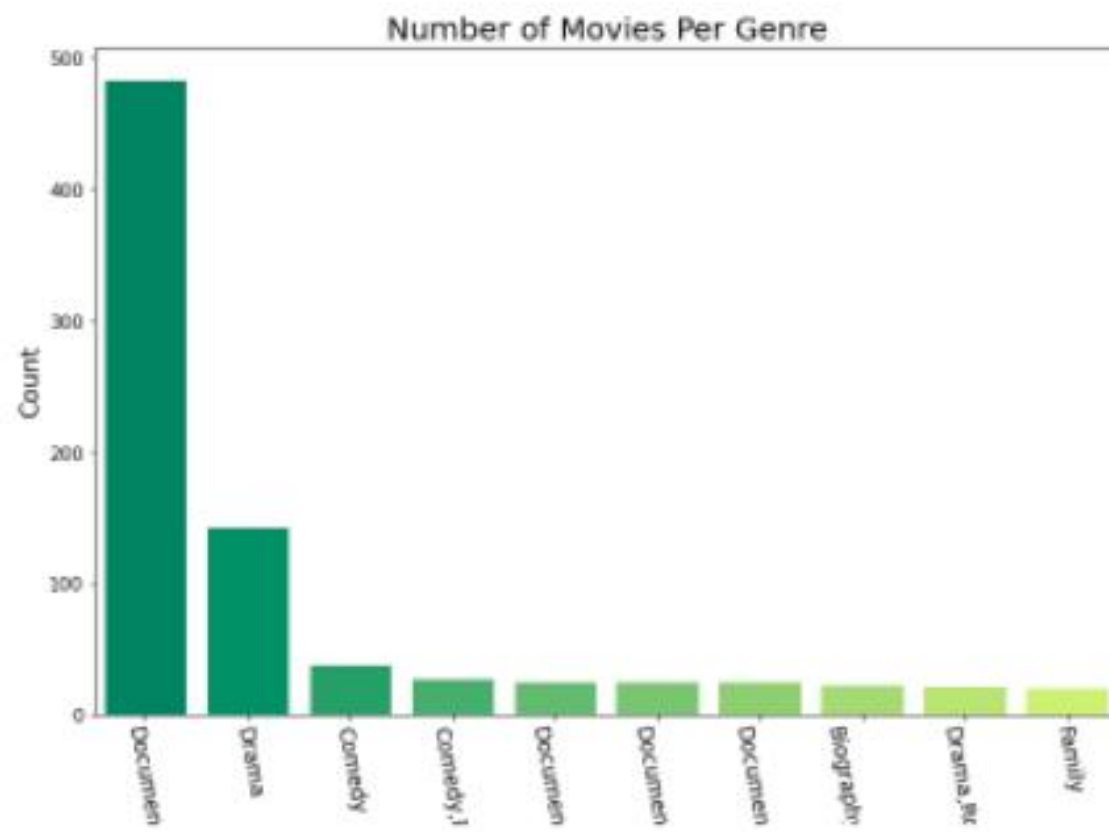

THE METHOD

I utilized descriptive statistics as well as visualizations to illuminate trends in the data and isolate key factors for making a successful movie.

What types of movies receive top ratings?

For the past 5 years the most top rated movies falls under the Documentary, Drama and Comedy genre respectively. Other top genres in this category include Romance, Family, Biography, Music and Sport.

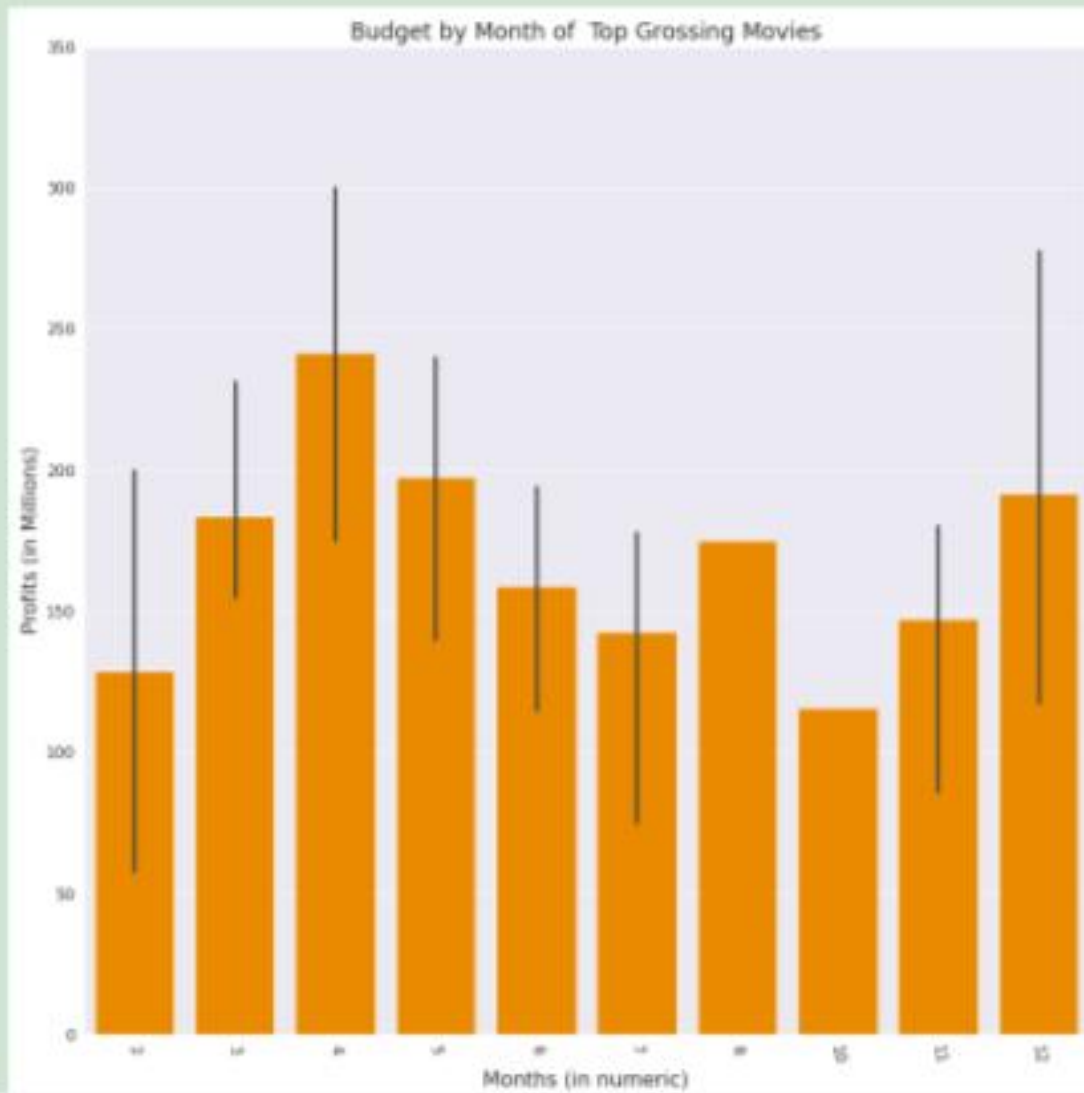

TOP 10 GROSSING MOVIES OF ALL TIME

Top 10 Grossing Movies of all Time

MOVIE BUDGET VISUALIZATIONS

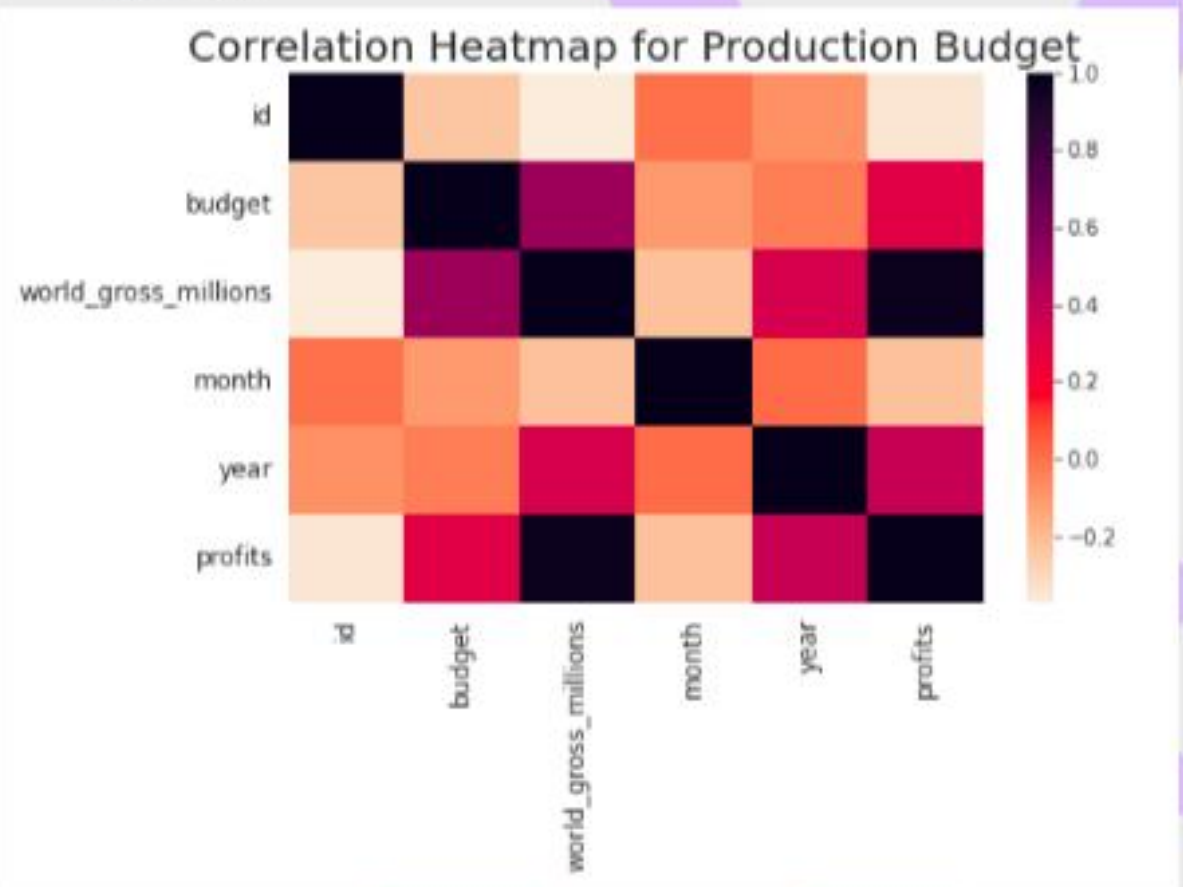

TOP MONTHS:
APRIL
DECEMBER
MAY

Production Budget: What budget amount tends to achieve the highest box office gross?

The heat map shows darker colors where two values are highly correlated and lighter colors where there is less of a correlation. From both the correlation method and the heat map, there was a strong correlation between budget and world gross, as well as a fair correlation between budget and profits.

While the correlation between month and anything different was negative which I ignored. The months values are stored as integers. From this visualization, I could conclude that, generally speaking, the more money you put into a movie, the more money you are likely to make from it.

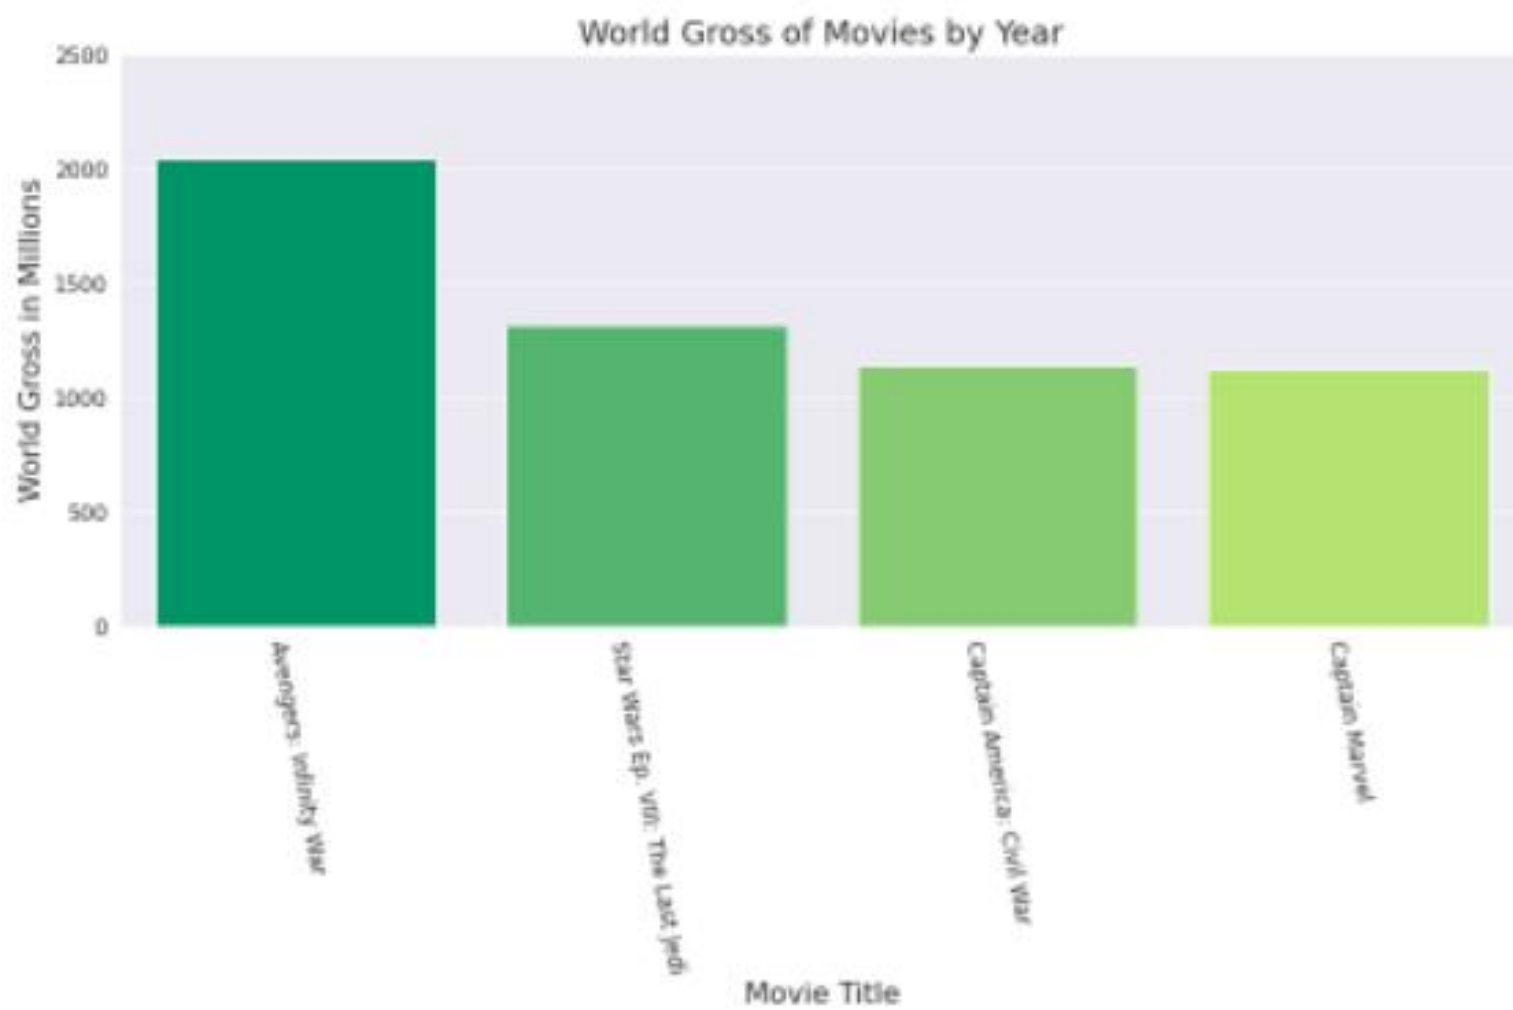

Top Grossing Movies Analysis by Year from 2016 - 2019?

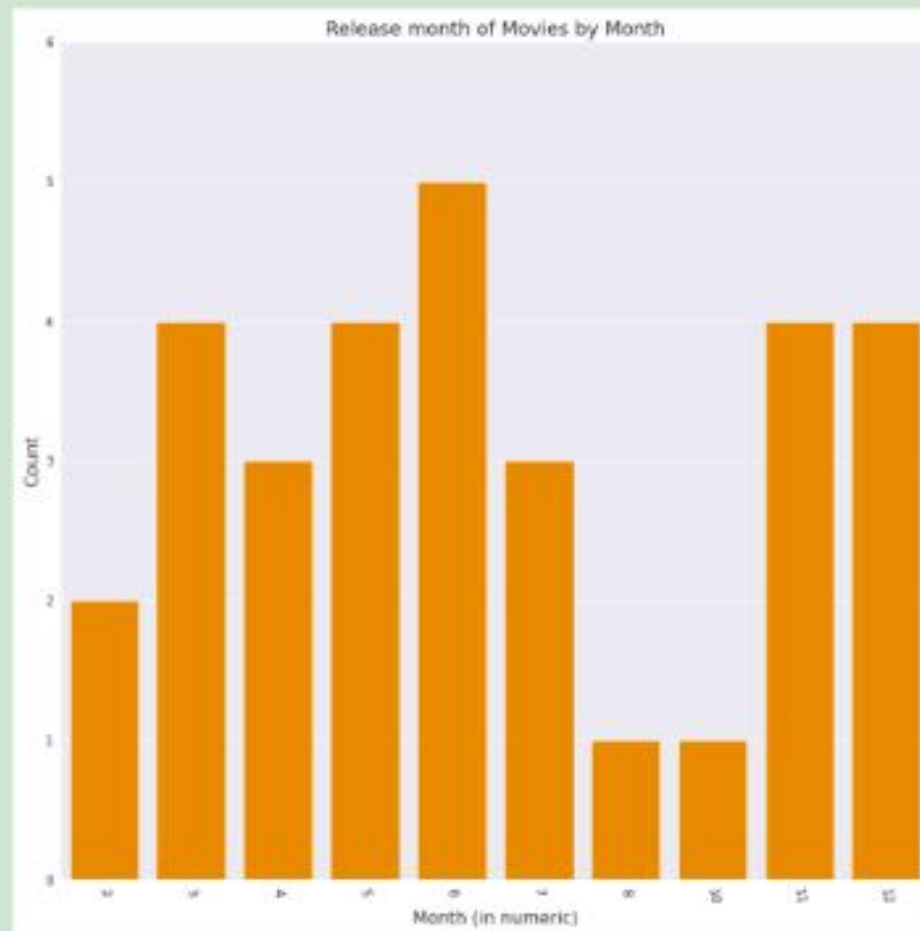

Top Crossing Movies Analysis by Year from 2016 - 2019?

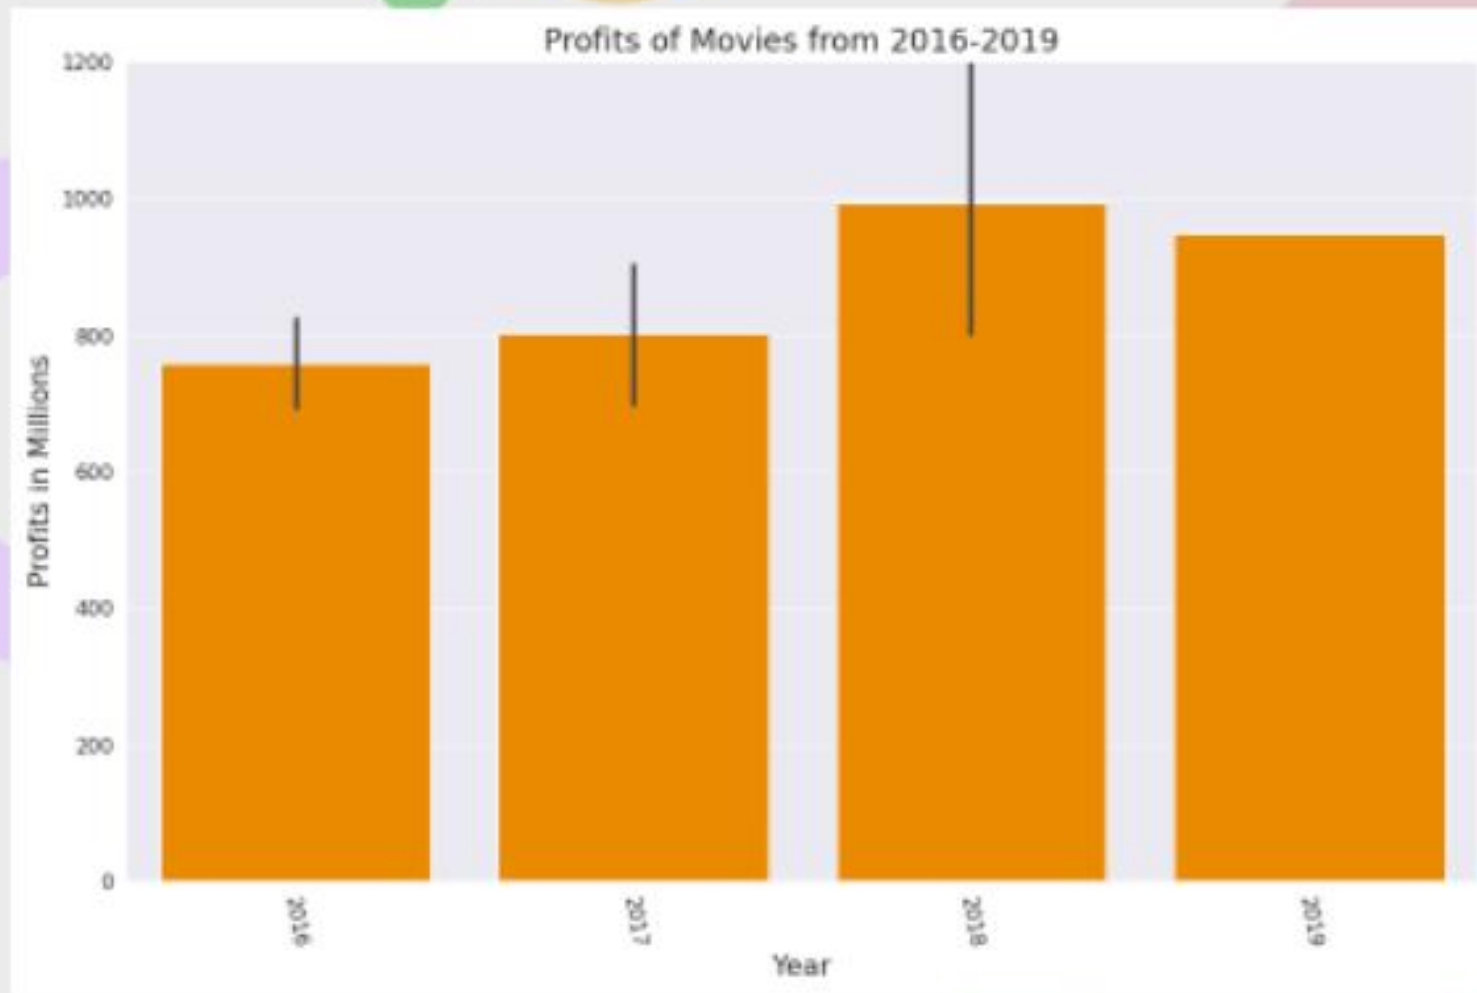

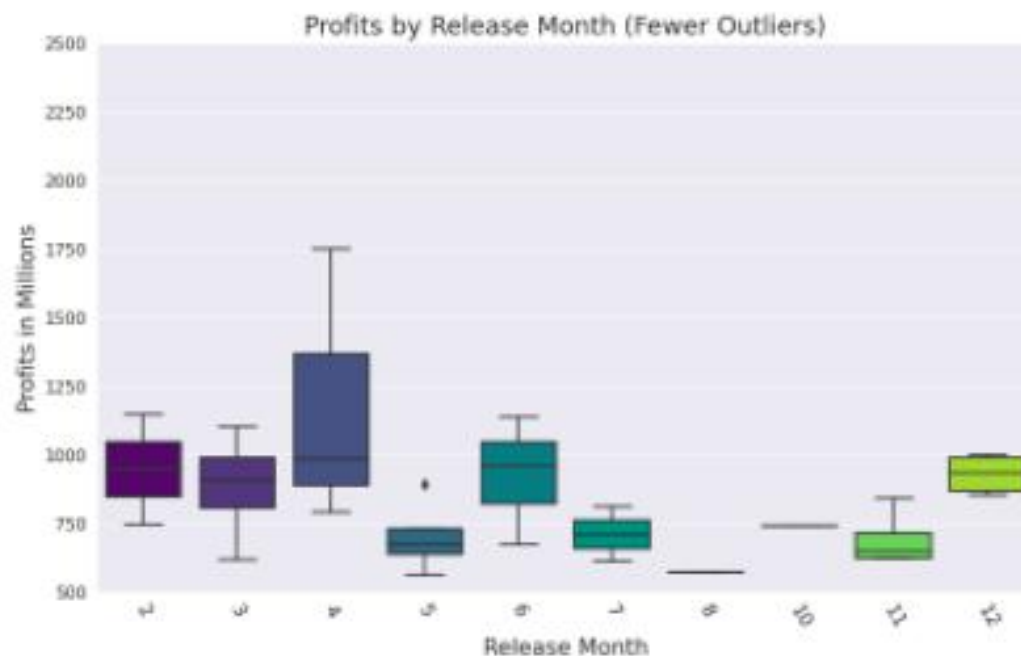

A visualisization of release time in months of the top grossing movies.

Profits visualisation by year of release for years 2016-2019.

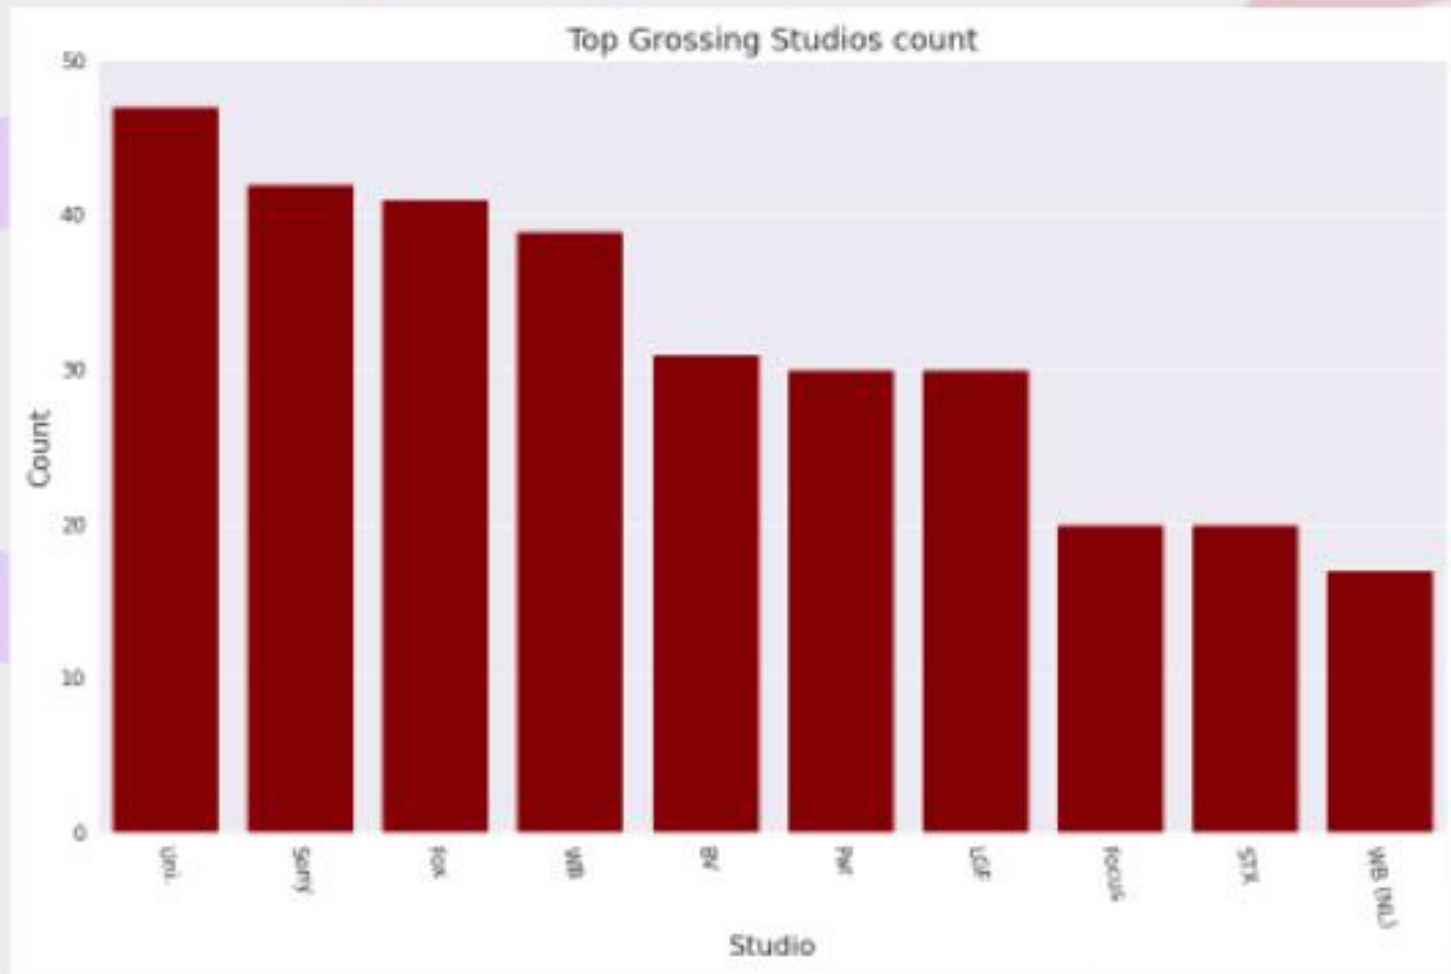

Profits by the month of release

The best profits were recognized in the months on the first half of the year. The top months were April, February, June and December. This visualisation changes the dynamic of my previous analysis. April being the most profitable month to release a movie makes it more preferable than June.

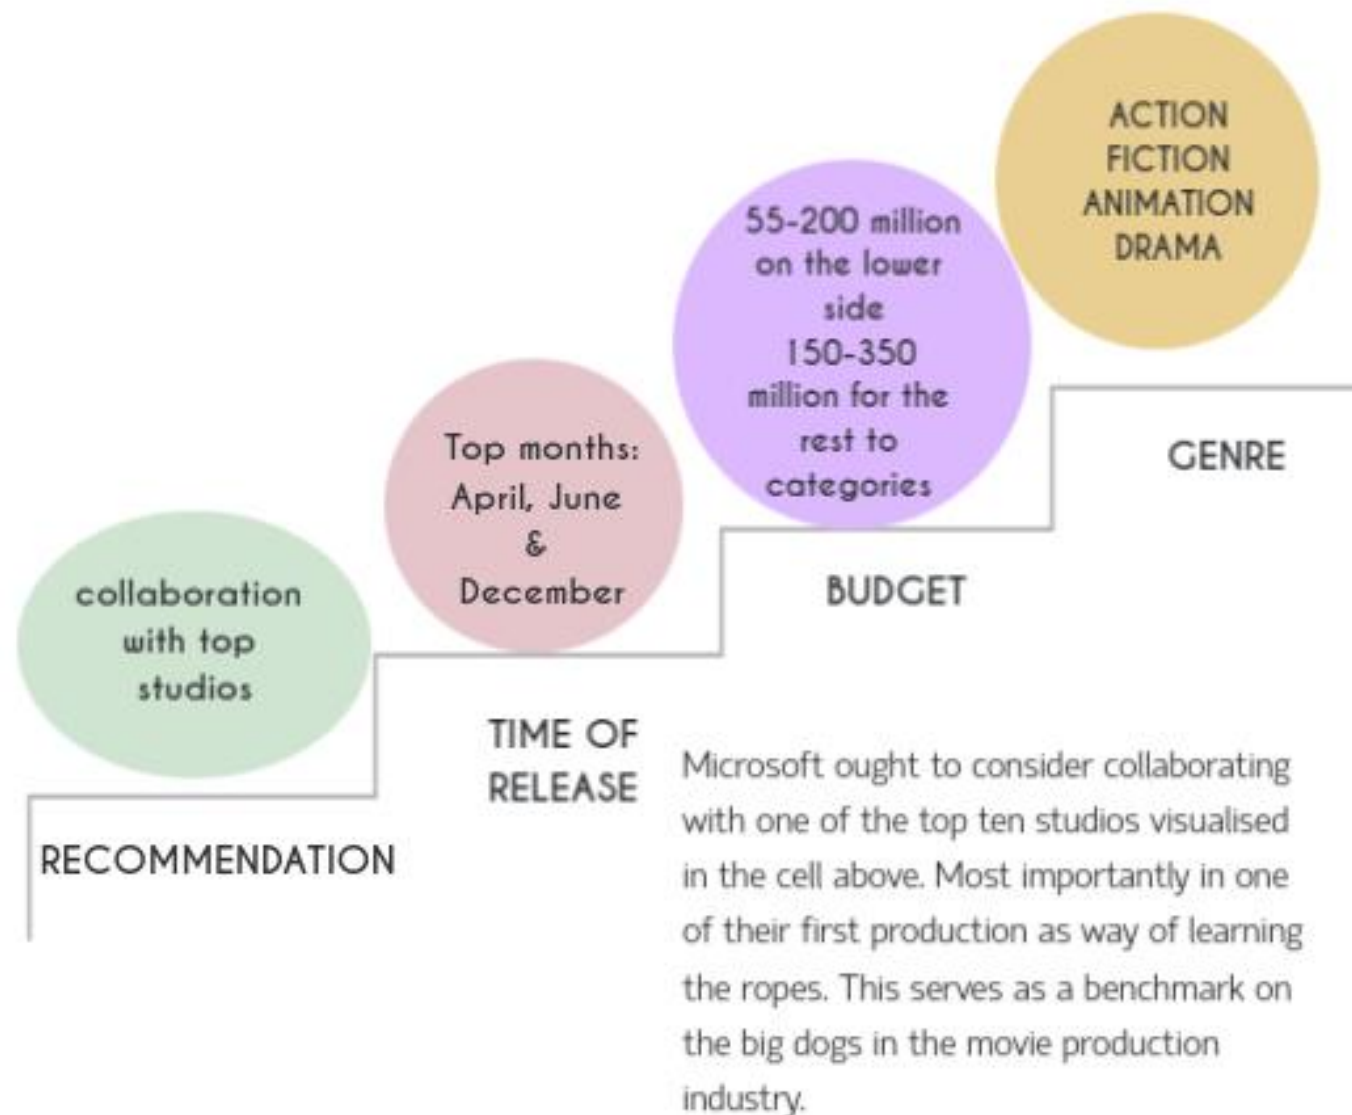

December becomes easily a third choice by being the best month to release on the second half of the year and its profit margins too.

STUDIOS WITH THE TOP GROSSING MOVIES.

RESULTS & CONCLUSION

My analysis and findings have shown that the more a studio invests in the production of a movie the higher the gross revenue they acquire easily getting bigger profits. Though there are some outliers, the majority of high-grossing movies for these particular types of movies are ones with higher budgets. For Adventure, Drama or an Animated movie, the budget is best at between 55 and 200 million dollars. For an Action or Fiction movie, that amount is between 150 and 350 million dollars. From my analysis, the best months to release a movie depends on the statistics collected on profits acquired. April came top followed by June and December. Moreover, I noted that the Action and Fiction movies were released mostly on April and June making them the top priority when considering release dates of these movies.

FUTURE CONSIDERATIONS

STREAMING SERVICES

In the future analysis it would be better to also do an analysis of streaming services and get more insights. This project can be as wide as one wants it to be but the objectives I set earlier have helped me come up with a short, thorough and insightful analysis and visualisation.

MORE DATA

Use a much updated dataset with additional elements that may be used for business analysis in a similar project.
For example, award winning movies tend to do well in revenue.

The background is a light gray color with various colorful geometric shapes scattered across it. These include solid circles in green, blue, red, and yellow, as well as larger hollow rings in purple, pink, and green. Some of these shapes are partially cut off by the edges of the frame.

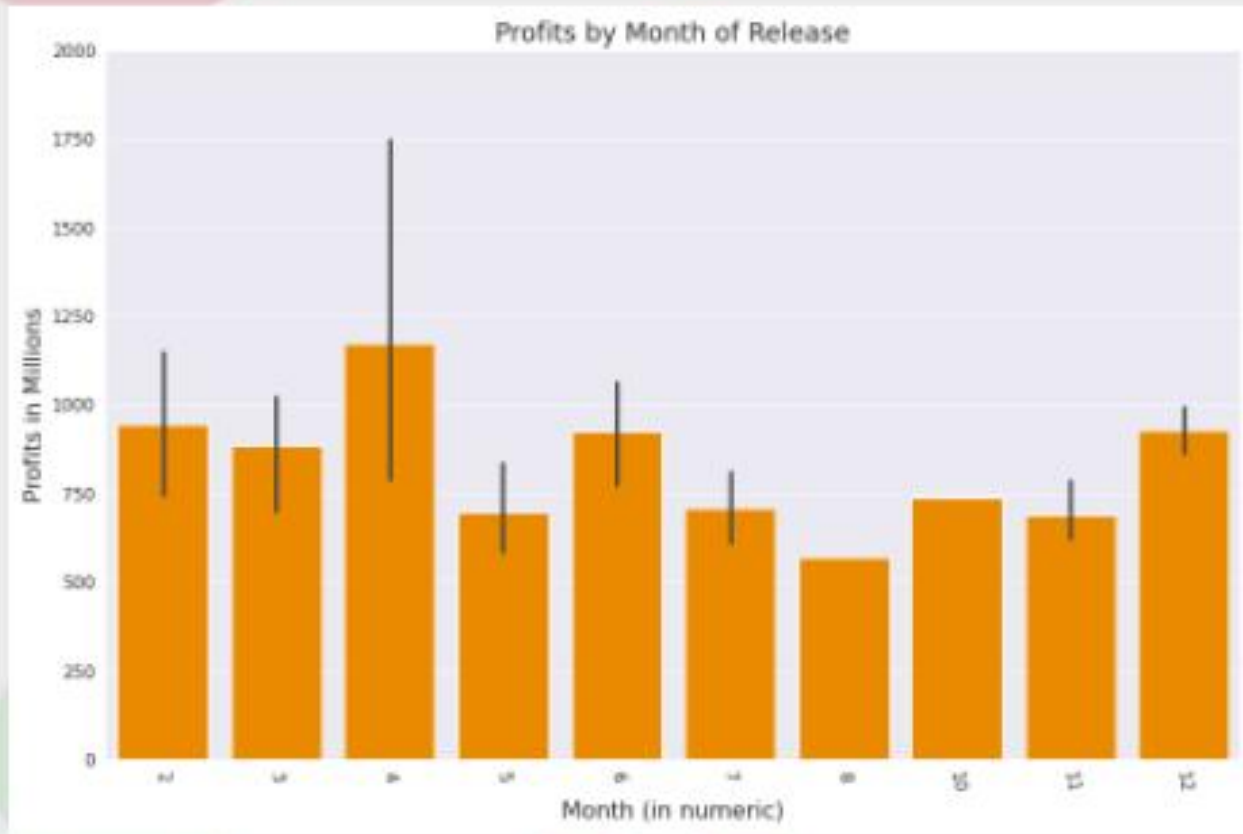

THANK YOU!
